DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of claims 1-13 in Paper No. June 17, 2003 is acknowledged.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3, 5, 7-10 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Bruckner et al (5,546,495).

Bruckner discloses a closure 10 comprising a housing 24 having internal cavity and a plurality of ports 78 opening into the internal cavity receiving a plurality of cable 14, and a fiber management frame including a support 36 for holding at least one optical fiber connection tray and a bias member including a pair of tension members 62 extending toward the support member 36 so as to define an acute angle with the support 36. Bruckner teaches that the tension member 62 is for over wrapping splice trays 26 to prevent inadvertent dislodging of the splice trays (see column 4, lines 18-24). The tension member 62 releasably holds the splice tray 26. Figure 4 shows a first end of the tension member 62 being remote from the support 36 and a second end of the tension member 62 being proximate the support 62. Also, the second end includes an upturned lip, which can be facilitated lifting of the tension member 62.

Allowable Subject Matter

4. Claims 4, 6, 11 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter:
None of the cited arts shows a handle interconnecting a pair of tension members and the tension member contacting a tray furthest removed from the support without protruding beyond the support while the support holds any number of trays from a single tray up to a predetermined maximum number of trays.
